

NASA Community College Aerospace Scholars

Ever wonder how your STEM class content is applied in the real world? NASA Community College Aerospace Scholars (NCAS) answers this question for you, a community college student, by having you:

- Spend 5-weeks in an online course learning about NASA's missions and research.
- Build relationships with similarly minded students.
- Attend briefings by NASA engineers and scientists.
- Qualify for a four-day residential onsite experience at a NASA Center, which includes immersion into NASA's unique facilities, culture and diverse workforce.
- Prepare to participate in other competitive NASA projects, activities, and opportunities.

Students pay only a \$35 registration fee to attend the onsite experience. NASA provides all travel, lodging and meals.

NCAS helps students make the connection between a STEM degree and career opportunities.
