Graphing Parabols Given the Standard Equation

Identify the vertex and axis of symmetry of each. Then sketch the graph.

$$1) \ x = -2y^2 - 8y - 14$$

$$2) \ x = -\frac{1}{3}y^2 + 2y - 1$$

$$3) \ x = -y^2 - 10y - 30$$

$$4) \ y = -x^2 + 1$$

$$5) \ y = 2x^2 - 24x + 70$$

$$6) \ y = \frac{1}{3}x^2 + 2x + 5$$

$$7) \ y = -x^2 + 8x - 22$$

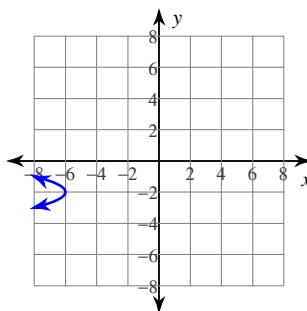

$$8) \ y = 2x^2 - 8x + 8$$

$$9) \ y = -x^2 - 8x - 16$$

$$10) \ y = x^2 + 10x + 24$$

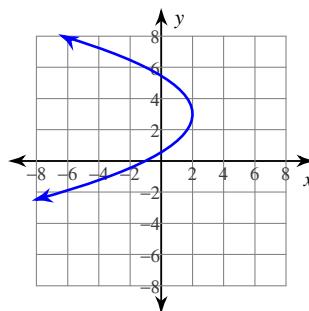

Answers to Graphing Parabols Given the Standard Equation

1)

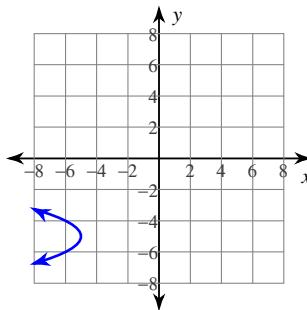

Vertex: $(-6, -2)$
Axis of Sym.: $y = -2$

2)

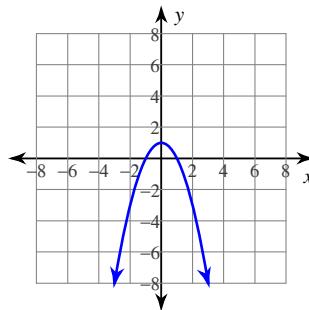

Vertex: $(2, 3)$
Axis of Sym.: $y = 3$

3)

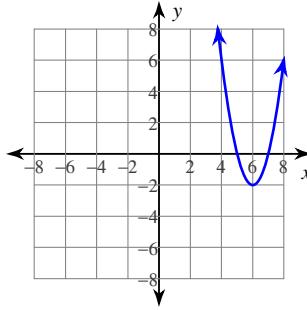

Vertex: $(-5, -5)$
Axis of Sym.: $y = -5$

4)

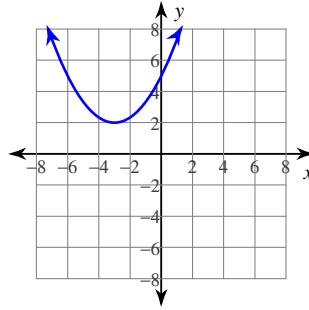

Vertex: $(0, 1)$
Axis of Sym.: $x = 0$

5)

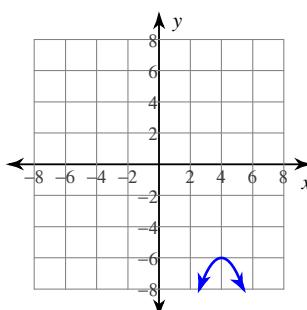

Vertex: $(6, -2)$
Axis of Sym.: $x = 6$

6)

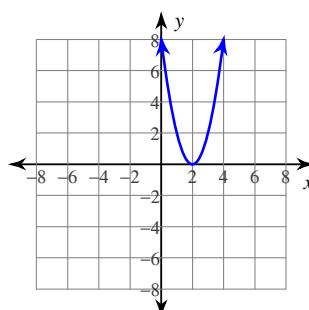

Vertex: $(-3, 2)$
Axis of Sym.: $x = -3$

7)

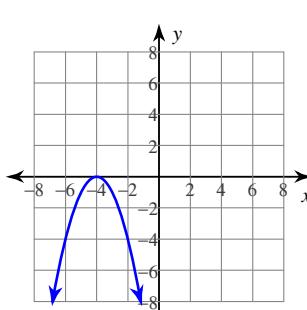

Vertex: $(4, -6)$
Axis of Sym.: $x = 4$

8)

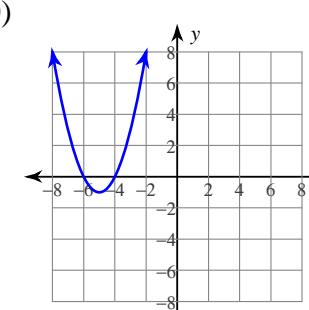

Vertex: $(2, 0)$
Axis of Sym.: $x = 2$

9)

Vertex: $(-4, 0)$
Axis of Sym.: $x = -4$

10)

Vertex: $(-5, -1)$
Axis of Sym.: $x = -5$
